GC Enterprise Architecture/Enterprise Solutions

< GC Enterprise Architecture

The GC EARB information is now maintained on GCX (https://gcxgce.sharepoint.com/teams/1000913/)

GC Enterprise Architecture	GC Enterprise Architecture Review Board, GC EARB
GC Service & Digital Target Enterprise Architecture	When to come
Enterprise Architecture Framework	Forward Agenda
Business Capability Model (BCM)	Past Sessions
Exemplar and Reference Architectures	10 Things You Need to Know
Enterprise Solutions	Governance for Digital Solutions
Working Groups	EA and GC EARB Overview – Presentation
Other References	

The following content is a synopsis of the December 15, 2020 DM CEPP presentation.

- Advancing Enterprise Solutions - Presentation to the DM CEPP on Dec 15, 2020

What is enterprise?

Enterprise is generally defined as “an organization” or “organizational unit”

In the GC, ‘enterprise’ refers to a whole-of-government holistic approach.

An enterprise approach can be applied various facets, like governance, solutions, standards and culture.

Enterprise solutions definition

Enterprise solutions are internal and external Government of Canada assets that can be re-used in and across multiple parts of the organization.

Why focus on enterprise solutions?

To “operate as one” and advance the CEPP mandate we propose to focus on enterprise solutions defined by to business capabilities.

Role of business capabilities

Business capabilities are an expression of **what a business does** and can do.

It is proposed that enterprise solutions are defined as business capabilities

How to get your solution declared as Enterprise Solution

- To get your solution declared as an Enterprise Solution in GC EARB, please fill out a special GC EARB Presenter Template (Special GC EARB French Presenter Template) specifically for Enterprise Solution.

It is similar to the regular GC EARB deck template with additional pages added to provide supporting rationale of why your solution needs to be declared as an Enterprise Solution and that you have fulfilled all the necessary requirements to support an enterprise solution.

- When ready, then look at forward agenda and send the deck along with a request to EA team (mailto:EA.AE@tbs-sct.gc.ca) to schedule a date for GC EARB
- GC Enterprise Architecture Team will contact you to review and conduct initial assessment with the extended EA team.

Once GC EARB approve it as an Enterprise Solution, then department needs to ready itself to provide service to other departments, which may include:

- create a MOU / agreement with the subscribing department for funding model and service model

What is needed for Enterprise Solutions to work in the GC?

The Enterprise Solutions framework has 3 facets.

Three facets

Governance	Culture	Solutions
▪ What are the roles and responsibilities and who decides who fills them? ▪ What is the financial and funding model for an enterprise solution? ▪ Which business capabilities should be addressed first? ▪ How will user expectations be addressed? ▪ What is the path to enterprise-wide	▪ Is everyone ready to buy-in to enterprise solutions? ▪ How do we ensure participation? ▪ How will open and transparent input be gathered? ▪ What are the mind-set and skills needed to foster an enterprise solution culture?	▪ Which business problem are we solving? ▪ Who can access the Enterprise Solution? ▪ What data and technology standards are required? ▪ Is the implementation secure enough? ▪ Will it always be reliably online?

adoption?		

The following content is research conducted by the EA team after December 15, 2020 DM CEPP presentation.

Enterprise Solutions Framework Assessment Key Findings

Key Findings

Governance	Culture	Solutions
OK - Pilots have been able to describe their solutions using the BCM, identify the business problem, and value proposition to address user needs ***Issue -*** Enterprise solution opportunities lack a defined path to advance and as a result tend to fizzle out ***Issue -*** Operational enterprise solutions governance and support is at a low maturity level ***Issue -*** Departments are not mandated and lack incentives to provide services to other departments, need a dedicated organization for enterprise solutions. ***Issue -*** Cost recovery and appropriation models are adequate for operational costs, but up-front funding is required for initial development and evolution of enterprise solutions.	***OK -*** Departments are ready to buy into Enterprise solutions once they exist, but lack of available ready to use solutions result in departments developing their own. ***Issue -*** Need dedicated teams of "enterprise" business owners and service providers to develop, operate and evolve enterprise solutions, do we need a Shared Services organization to act as the service provider? Do expand SSC mandate to include applications? ***Issue -*** Mandate use and appropriate departmental funds. Define a clear role and responsibility for users to determine needs and for the Business Owners and Service Provider to be accountable.	***OK -*** Identifying and developing enterprise solutions is not a problem, focus needs to be on governance and culture ***OK -*** Pilots have been able to define the business problem and processes like the concept case and GCEARB are existing tools that can be used ***OK -*** Cloud base solutions from public cloud service providers are enabling business owners to envision enterprise solutions but they need technical partnerships from dedicated solution providers to provision IT

Proposed Roles and Responsibilities for Enterprise solutions

Stakeholders, defines ”who”	Stakeholders in the form of a ‘product board’ determine and validate user needs, prioritize the delivery roadmap and manage the related expenditures. ▪ business/program representatives from across departments ▪ sponsors enterprise solution ▪ identify users ▪ determine user needs ▪ consumes ▪ contributes funds
Business Owner, defines ”what”	The Business Owner has overall accountability for delivering on the business outcomes and achieving the benefits that a solution is meant to enable or facilitate. ▪ Defines the required capabilities and intended business outcomes and benefits ▪ Serves as sponsor and is accountable for the achievement of the business outcomes and benefits following implementation ▪ Establishes and maintains governance ▪ Secures funding and resources and provides oversight ▪ Consults with and engages stakeholders and other implicated parties to ensure alignment towards delivery ▪ Reviews and signs-of on key strategic risks ▪ Authorizes the IT service ▪ Oversees data stewardship practices at the production solution-level ▪ Creates roadmap for service or product improvements
Service Provider, defines ”how”	The Service Provider operates and manages IT solutions and/or services and provides them to end users. ▪ Responsible on behalf of an organization for requirements definitions, service delivery, security and reliability ▪ Implement the requirements ▪ Signs off on platform scope ▪ Collect data to measure service levels and key performance indicators ▪ Ensure compliance with standards ▪ Monitor, test and adjust as required ▪ Support innovative products and services ▪ Conduct security assessments

Proposed Governance for Enterprise solutions

DM CEPP

- Enterprise Business Direction

Product management board per solution

- Cross departmental stakeholder representation

GC EARB

- Alignment with Enterprise Architecture Framework

Draft DM CEPP presentation still to be presented

- Updates and progress on Enterprise Solution - May 17, 2021

The following initiatives endorsed by GC EARB have characteristics of Enterprise Solutions

This registry of GC Enterprise Solutions are classified in the layers of the EA framework

Business Architecture

Business Intelligence:
